Projects

Book Meetups

Final project for Dev Bootcamp. In one week, this app was built with Rails using PostgreSQL and hosted on Heroku. This app uses geolocation to track closeness of friends and integrates the Google Books API to crowdsource the seeding of the book database. The design is hand-crafted CSS and responsive, with Javascript and AJAX for select form requests.

Cool Faker

An open source Ruby gem used to create fake data (names of people, team names, slogans) for testing purposes. Names generated are characters from famous movies and TV shows, slogans are famous quotes, and team names are randomly generated from animal and negative adjective word lists.

Technical Skills

Ruby on Rails	HTML5	Git
Ruby	CSS3	Github
Capybara	SQL	Bash
Active Record	PostgreSQL	Rspec
MySQL	Javascript	Agile
Object Oriented Programming	Test Driven Development	Adobe Photoshop & InDesign

Education

Dev Bootcamp - San Francisco
Jan-Mar 2014

Clocked over 1000 hours of intensive, hands on web development. Focus in Ruby on Rails and Javascript employing MVC, OO, and Agile workflow. Gained understanding of frameworks and libraries through custom projects mirroring real world applications. Heavy focus on engineering empathy and self-driven learning.

San Francisco State University - San Francisco
2006-2009

International Relations — 3.7 GPA

Researched intellectual property rights of indigenous societies, mainly in Latin America and Africa. Heavy focus on the interaction between first world industrial societies and third world communities.

Universidade Federal do Ceara - Fortaleza, Brazil
Summer 2004

Cultural Exchange Program

Experience

Social Media Management, Web Design
2012-2013

Independent Contractor, San Francisco

Volunteer Editor, Intern
2009, 2012-2013

Kiva.org, San Francisco

Arts and Culture Writer
2012-2013

SF Weekly, San Francisco

Assistant Manager
2011

MKTG Productions & Google Chromebook, San Francisco
